

Science at St Margaret's

Our Vision

At St Margaret's, we believe in fostering a deep curiosity for the world around us and inspiring a lifelong love for science. Our science curriculum aims to empower our children with the knowledge, skills and attitudes necessary to create a learning environment that encourages exploration, experimentation and collaboration. Our children will feel confident to ask questions, make observations and seek evidence to support their ideas.

Principles

Science is good at St Margaret's when...

						
we get to have fun in our learning and discover new things	we explore through hands-on, practical activities	we are inquisitive, think hard, ask questions, make predictions and test our ideas	we can work together to share our scientific thinking	we are able to solve problems and explore our own ideas so we can think like a scientist	we talk like a scientist by using scientific vocabulary to apply and connect our learning	we use the outdoors and our local area to explore the science on our doorstep
